Education

CHRIST University, Bengaluru — B.Tech, Computer Science and Engineering GPA 3.51/4.0, Expected May 2029

Summary

Full-stack CS undergraduate building AI-driven product features end-to-end — an LLM-powered report automation service and a live LMS (Class Stream) spanning Angular/React front ends, Node.js backends, and MongoDB/MySQL data layers. Strong grounding in data structures, OOP, and algorithmic problem-solving; picks up new frameworks and languages fast (recently: Kubernetes, React Native, Rust, Go).

Experience

Tech Lead (promoted from Backend Developer after 1 year) — **CAPS, CHRIST University** Jul 2025 – Present

- **Built** an LLM-powered report automation service (Angular UI + Node.js backend + multi-provider LLM abstraction across Anthropic, OpenAI, OpenRouter, NVIDIA, Google) generating **dozens of structured reports** for CAPS teams
- **Shipped** an LMS assessment stack — Angular front end over Node.js + Express + Redis-cached MongoDB — serving **100–500 students** across a CAPS department
- **Delivered** a WebSocket discussion forum with an Angular admin moderation dashboard, sustaining **400–500 concurrent users** on Redis + MongoDB
- **Lead** 14 developers across 8 concurrent CAPS full-stack products, coordinating frontend/backend delivery and running design reviews
- **Debugged and optimized** application performance across all 8 CAPS services using Prometheus + Grafana + Loki for latency, availability, and error-rate monitoring

Student Flutter Developer — **Centre of Excellence, CHRIST University** Oct 2025 – March 2026

- **Built and handed off** a Flutter data-visualization + IoT monitoring app to **InnovMon Technologies**, deployed under their brand
- **Implemented** interactive charting, JWT authentication, and responsive multi-screen navigation

Projects

Class Stream — AI-Ready LMS + Live Streaming Platform (solo) Live at school.pratyushes.dev

- **Built** an Angular front end (standalone components, Signals, PWA) integrated with a Node.js/Express + Socket.IO backend across **~45 REST endpoints**
- **Integrated** gpt-4o-mini for structured JSON extraction from admission forms, plus OpenCV face detection for admission photos
- **Shipped** MPEG-DASH streaming with FFmpeg + Bento4 transcoding and ClearKey DRM key delivery

Phone-Based AI Proctoring System (React Native + Python CV) Jan 2026

- **Built** a React Native mobile client streaming camera frames and multi-sensor data (accelerometer, gyroscope, magnetometer, barometer, audio, touch) over WebSocket to a Python CV backend

Platform — Open-source Internal PaaS (personal project, in build) github.com/Mpratyush54/server-automation

- **Architected** an on-prem PaaS on Kubernetes with an Angular developer portal and Next.js API, cutting new-service go-live to **~5 minutes** from git push to preview URL
- **Built** first-party SDKs for Angular and React consuming the platform's REST + WebSocket APIs

Ambue Pharmaceutical Reporting Platform Dec 2023 – 2024

- **Shipped** an Angular + Node.js/Express + MySQL reporting platform to AWS EC2 with JWT-based RBAC, run in production for **~1 year** as an industry client project

Technical Skills

CS Fundamentals: data structures, algorithm design, OOP, complexity analysis, problem-solving

Frontend: Angular (standalone components, Signals, PWA), React, React Native, Flutter, TypeScript

Backend: Node.js, Express, Next.js, REST, WebSockets, Socket.IO, JWT

AI / LLM Integration: multi-provider LLM abstraction (Anthropic, OpenAI, OpenRouter, NVIDIA, Google), BYOK auth, structured-output generation

Databases: MongoDB, MySQL, PostgreSQL, Redis

Infra: Docker, Kubernetes, ArgoCD, GitLab CI, AWS EC2, Nginx, PM2, Prometheus, Grafana, Loki

Languages: TypeScript, JavaScript, Python, SQL, C
